A photograph showing a forklift operator on a dock leveler platform. The operator is wearing a dark jacket and is seated on the forklift. The forklift is positioned on a grey metal dock leveler that is raised to match the height of a wooden pallet on a higher level. On the pallet, there is a stack of several metal kegs. The background shows the interior of a warehouse or dock area with a corrugated metal wall. The text 'Dock Leveler' is overlaid in white on the image, with a stylized logo to the left of the word 'Dock'.

 **Dock** Leveler

# DOCK LEVELER

The meeting point between vehicle and loading bay is today regarded as far more important in the materials handling chain than ever before. IRack® stationary dock levelers are an absolutely safe means of filling this gap. Using this technology, a vehicle can be loaded or unloaded in less than 9 minutes by only one person using a lift truck. Solid construction and high load bearing capacities make IRack® equipment tough enough for any loading situation. Contact with the lorry bed can be made either by using an extending platform, which can be controlled to within millimeters or a swing out lip
